## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2 and 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by US 2002/0021089 (US '089). US '089 discloses a method of manufacturing an organic EL device comprising the steps of forming first electrodes on a transparent substrate, depositing a photoresist layer over the whole surface of the transparent substrate and the first electrodes, aligning first and second masks while interposing the transparent substrate there between, forming an insulating layer and partition walls having different thicknesses and patterns by simultaneously exposing through the first and second masks, forming an EL light-emitting layer on pixel regions, and forming second electrodes on the EL light-emitting layer. See the abstract; paragraphs [0014] and [0027]-[0034]; and Figures 3-5.

2. Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by US 2003/052596 (US '596). US '596 discloses a method of fabricating an organic EL

Application/Control Number: 10/629,769

Art Unit: 1756

display comprising the steps of forming a plurality of first electrodes on a transparent substrate, stacking an insulating layer pattern on a first area crossing with the first electrodes and a second area in parallel with the first electrodes wherein a half tone pattern is formed on the second area, forming a plurality of organic light-emitting layers on the first electrodes, and forming second electrodes. See paragraph [0038]. The half tone pattern is formed to be lower than the other portion of the insulating layer pattern by exposing a photoresist layer through a half tone exposure mask comprising a shield area, a light-transmitting area, and a half tone area, wherein the half tone area may be constituted of slit type patterns. See paragraphs [0079]-[0097] and [0100]; Figures 9A-11D and 12B.
